Art Unit: 1774

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-15 are rejected under 35 U.S.C. 102(a or e) as being clearly anticipated by Mori (US 6,494,627).

Mori, a Fuji Photo film patent, teaches a heat sensitive recording material comprising recording layers (a) to (f). Mori further teaches thermal layer (a) includes microcapsules of component A, which is a diazonium salt compound. See column 4, lines 15-26 and column 19, lines 1-30. Mori still further teaches the thermal layer (a) also includes a compound B, which is a coupler compound at column 20, line 1. Mori yet still further teaches the thermal layer (a) further includes a photo initiator which contains spectral sensitization dyes such as oxonol dyes. See column 31, line 6 of Mori.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 10/678,640

Art Unit: 1774

Claims 16-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mori.

Mori is applied for reason of record supra. Mori teach that spectral sensitization dye such as oxonol dyes are added to photo initiators in order to obtain a desired color-forming density at a lower energy. See column 30. Mori however is silent to exact amount of oxonol dyes of claims 16-20. Thus, it would have been obvious to one having ordinary skill in the art to vary and control the amount of oxonol dye in the thermal layer of Mori in order to obtain a desire color forming density at a lower energy. Hence, Mori possess a reasonable expectation of success to obtain the claimed oxonol dye amounts and thus put the claimed invention in possession of the public.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Examiner Edwards whose telephone number is (571) 272-1521. The examiner can normally be reached on Monday-Friday from 6:00 am to 2:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Cynthia Kelly can be reached on (571) 272-1526. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
